

Jaryd A. Bones

Mission Viejo, CA | (949) 521-8554 | jaryd.bones@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

Early career software engineer with hands-on experience building and maintaining production grade, scalable web applications. Strong computer science foundation and practical experience across the full software development lifecycle, including backend services, RESTful API design, and modern React-based frontends. Experienced in translating business needs into effective technical solutions, bringing a strong work ethic, problem-solving mindset, and clear communication skills while adapting quickly to new environments and delivering clean, maintainable solutions to real user problems.

Technical Skills

Languages: JavaScript, Python, C++, Java, HTML, CSS | **Other:** REST API development, JWT authentication, responsive UI design

Tools & Platforms: Git, GitHub, Linux, Docker, Google Analytics, Render, VS Code, Copilot | **Databases:** PostgreSQL, MongoDB

Frameworks & Libraries: React, Node.js, Express, FastAPI, Bootstrap, PyTorch, Scikit-learn

Professional Experience

Full Stack Developer (Contract) | Legacy Real Estate Services Inc | Mission Viejo, CA

Feb 2025 - Oct 2025

Live websites: <https://www.legacyresinc.com>, <https://www.california-reverse-mortgages.com>

- Sole developer responsible for designing, building, deploying, and maintaining two production real estate and mortgage websites with React frontends and Node.js, Express, and PostgreSQL backend services and APIs
- Built customer facing websites and internal admin dashboards including appointment scheduling systems, blog management tools, a mortgage payment calculator, GA4 analytics integration, secure submission endpoints, and responsive SEO-friendly Bootstrap UIs
- Managed both platforms after launch, handling feature rollouts, bug fixes, backend logic refinement, UI updates, and ongoing maintenance to ensure reliability and a consistent user experience

E-File Technician | DDS Legal Support Systems | Costa Mesa, CA

Oct 2024 - Present

- Prepare and electronically file legal documents with strict accuracy and court compliance, enter new cases into court systems, and schedule hearings while coordinating with legal teams

Personal Projects

AI Study Guide Maker - FastAPI, React, PostgreSQL, OpenAI API, Tesseract OCR, PyMuPDF

- Built a full stack web application that converts user uploaded PDFs, images, and text into AI generated flashcard sets using OCR, PDF parsing, and GPT powered content generation
- Implemented a document processing pipeline with Tesseract OCR and PyMuPDF, secure JWT based authentication, and backend services built with FastAPI and PostgreSQL
- Developed a responsive React interface supporting file uploads, flashcard editing, and study progress tracking

Panorama Image Stitcher - Python, FastAPI, OpenCV, NumPy, SciPy

- Built a full stack image stitching application that combines overlapping images using classical computer vision algorithms
- Implemented feature detection and matching using Harris corner detection, SIFT-like descriptors, and RANSAC
- Developed an interactive React interface for tuning parameters and results visualization

Sudoku Puzzle Generator & Game - React, Bootstrap

- Developed a Sudoku puzzle generator using the backtracking algorithm with selectable difficulty levels
- Built a responsive game interface with a timer, mistake counter, and keyboard and mouse input support

Education

B.S. in Computer Science, Dean's Honors List, University of California, Davis (Sep 2020 - Aug 2024)

Coursework: Data Structures, Algorithm Design & Analysis, Software Engineering, Operating Systems, Computer Architecture, Machine Learning, AI, Deep Neural Networks, Computer Vision, Probability & Statistics for CS, Programming Languages

Certifications

FreeCodeCamp Full Stack Developer Track:

Responsive Web Design - HTML, CSS, accessibility, responsive layouts

JavaScript Algorithms and Data Structures - algorithmic problem solving, OOP & FP

Front End Development Libraries - React, Redux, Bootstrap, Sass | **Data Visualization** - D3.js, JSON, APIs, interactive charts

Relational Databases - PostgreSQL, Bash, Git, SQL | **Back End Development and APIs** - Node.js, Express, MongoDB, microservices

Quality Assurance - testing with Chai, authentication, real time communication
